Combustible Dust

Prevent the danger of dust and gas explosions
with a wide range of ATEX approved solutions

Explosive atmospheres, a potential risk!

Nederman fulfilling the ATEX demands

- Proven explosion test of filters
- ATEX compliance is ensured by means of explosion relief doors, panels, flameless venting and suppression
- The risk of an explosion spreading shall be prevented by installing safety equipment such as rotary valves, explosion isolation flap valves etc.
- ATEX designed fans for handling potentially explosive dust

Explosive or potentially explosive atmospheres occur in a wide variety of workplaces where process dust comprises fine aluminum dust, organic powders or other similar substances. They can also be found where flammable gases or fumes derived from chemicals or petroleum products are present. The consequences of explosions can be extensive. Besides causing direct injuries to employees, filter systems can be ruptured and contaminated air for personnel and environment emitted with subsequent health risks.

All workplaces in the European Union must comply with the regulations set under the ATEX directives. Employers are required to evaluate and classify their working environments to determine the risks. Additionally, all process and production equipment must meet the regulations concerning technical and legal standards. In many other countries the practice of ATEX is also adopted.

Directive 2014/34/EU

ATEX Equipment Directive

ATEX stands for ATmosphere EXplosive. The ATEX directives cover machinery, components and controls that work in explosive atmospheres.

Directive 1999/92/EC,

ATEX Workplace Directive

This ATEX directive states that:

- The employer must determine how often, and where a potentially explosive atmosphere will be present.
- These areas must be zoned according to the relevant specifications.
- The employer must ensure only equipment of the correct category is used in a certain zone type.

Avoid explosions by creating a safer environment

Keep the workplace clean

The first and most important step is to minimize the occurrence of potentially explosive dust or powder by capturing the dust directly at the source and keeping the workplace clean and tidy. Nederman offers a wide range of industrial cleaning solutions from simple, light suction appliances to heavy duty, high capacity equipment. Nederman also supplies high vacuum cleaning equipment facilitating the important good housekeeping.

Use correct equipment

Sparks and static discharges can easily start an explosion. By using machines and production equipment without ignition sources and equipped with adequate earthing, risks can be reduced. The Nederman ATEX-designed extraction arms, fans and filters ensure safe and efficient removal of hazardous fumes, vapors and dust.

Minimize the effect of an explosion

Risks and explosion effects can be minimized by installing the extraction equipment in a safe and correct way. Nederman has wide experience of providing suitable solutions. These include extraction equipment complete with safety devices that prevent the consequences of explosions and widespread damage.

In the US the standard NFPA 652 Combustible Dusts Fundamentals standard is used.

This standard presents safety measures to prevent and mitigate fires and dust explosions in facilities that handle combustible particulate solids, which includes combustible dusts, fibres, flocks, flakes, chips and chunks.

EX products and safety components

Nederman offers safe and reliable solutions for handling combustible dust and gases. Based on the customer's risk evaluation, we recommend suitable equipment for each application. The products are designed to comply with the ATEX directives.

Safety components, fans and other components for use with combustible dusts and gases.

Explosion isolation flap valve CARZ

Rotary valve type NRSZ for emptying of combustible dust from the dust collector.

Fans type COMBIFAB-FZ

ATEX designed combustible dust extraction arm NEX DX.

Hose reels for use in ATEX zones.

Industrial vacuum cleaners for removal of flammable liquids and combustible dust.

Nederman Dust Collectors - suitable for most combustible dust applications. From small dust amounts to heavy material contaminations.

LCP cartridge and LBP bag-house dust collectors
Applications - fine dust, shot blasting, pharmaceuticals.

LBR SmartFilter dust collector
Applications - wood, furniture production, bulk, materials.

MCP SmartFilter dust and fume extraction solutions
Applications - metal grinding, fine dust, bagging operations.

PAK-M DX high vacuum unit

FlexPAK DX high vacuum unit

Applications: sanding, grinding, metal chips, organic dust and more.

FlexFilter Ex units

Combustible dust experts with a wide range of ATEX approved solutions

Complete solutions that protect people, planet and production

Comprehensive product range

Nederman is a world-leading environmental technology company with solutions that take their origin in “capture-at-source”, i.e. extraction of contaminants right at the point of creation. We filter, clean and recycle to create eco-efficient production in demanding industrial surroundings. Our offer includes individual products, engineering design, installation, commissioning and service. By continually adding new skills and solutions and expanding our geographic presence, we help our customers to develop their businesses both economically and ecologically.

What is combustible dust?

Combustible dust is any fine material that has the ability to catch fire and explode when mixed with air. Many materials can become combustible dust under specific conditions. Examples include:

- Agricultural products such as flour, sugar, grain, soya beans, rice etc.
- Metals such as aluminum, magnesium, titanium etc.
- Coal and other carbon dusts
- Pharmaceuticals, pesticides, rubber
- Wood, textiles, plastics

Extensive experience

For more than 75 years, Nederman has developed products and solutions to reduce the strain on the environment and protect people from harmful particles, fibers, dust, gas, smoke and oil mist. We have extensive experience of how to create a safe working environment, also when handling combustible substances. Our accumulated knowhow is easily accessible when you plan a new facility or need to modernize existing operations.

Worldwide presence

Nederman has a strong global presence in both sales and production. We have our own sales companies in 30 countries and distributors in more than 30 countries. Production is performed in 12 countries on five continents. In many countries, we also have a well-established service organization. By offering advanced service with high availability, Nederman helps customers to secure continuous, optimized production.

The Nederman logo is displayed in a white, slanted rectangular box. The word "Nederman" is written in a bold, blue, sans-serif font. The background of the top half of the page is a composite image: the left side shows a dramatic sky with large, billowing clouds in shades of orange, red, and purple, suggesting a sunset or sunrise; the right side shows a person in a grey hoodie sitting on a ledge, looking out over a cityscape at dusk.

Nederman

The Clean Air Company

Nederman is an environmental technology company and a global leader in industrial air filtration dedicated to extracting, transporting and cleaning air to make industrial production more efficient, safe and sustainable. Based on industry leading products, solutions and services in combination with innovative IoT technology, we monitor and optimise performance and validate emissions compliance to protect people, planet and production.

The Nederman Group is listed on Nasdaq Stockholm. The Group has approximately 2,500 employees and a presence in more than 50 countries. Learn more at nedermangroup.com
